Process Automation Engineer Job Description:

This role is based near Terre Haute, IN at the Clinton Manufacturing Site, this company's largest US manufacturing center. You will have the opportunity to work in a dynamic and complex manufacturing environment, partnering with cross-functional teams to deliver innovative automation solutions focused on safety, reliability, quality, operability, throughput, and cost.

The **Automation Engineer** is responsible for delivery, support, and optimization of automation systems at this location. In this role, you will play a key role in day-to-day process support and delivery of area projects with a focus on troubleshooting, installation, safety, compliance, and continuous improvement.

Automation Engineer Responsibilities:

Technical Execution

- Provide comprehensive and timely control system support for business area operations, including troubleshooting, issue resolution, corrective actions, and change management activities.
- Recommend and implement process improvements using automation solutions.
- Use knowledge and experience to optimize control strategies.
- Serve as key resource for a business area and control system, as assigned.
- Influence decisions on control system selection, design, validation, and strategy.
- Demonstrate comprehensive understanding of computer system validation principles.

Project and Financial Management

- Influence planning, execution, and delivery of projects that require automation resources.
- Coordinate efforts of site resources, contract resources, and project teams to facilitate small to medium scale project delivery.
- Manage budget, process schedules, and financial impact and interact with business to minimize downtime and mitigate risks to project delivery.
- Communicate issues and drive issue resolution.
- Facilitate project development meetings to ensure all areas of the business requirements and objectives are being addressed.

Influence/Business Engagement

- Identify customer requirements and develop solutions to meet the business needs.
- Understand, deliver, and document business value to customers.
- Improve productivity through effective application and replication of successful automation and control solutions.
- Establish key relationships internal/external to the business area.
- Identify customer requirements and develop solutions to meet the business needs.
- Partner with Computer System Quality to ensure validation compliance.
- Increase site utilization of Automation systems, data and tools by training, mentoring, and coaching peers.

Process Automation Engineer Basic Minimum Qualifications:

- BS Engineering (or equivalent – Majors in: Controls and Computer Control Systems, Automation Engineering, etc.)

- **DeltaV** DCS programming experience required
- Additional programming experience preferred (PLCs, HMIs, vision systems, etc.)
- Excellent interpersonal skills.
- Strong verbal and written communication skills.
- Ability to prioritize multiple activities.
- Proven organization and time management skills.
- Strong project management/delivery skills including ability to resolve or escalate issues.
- Preferred experience working in a **regulated manufacturing** environment.
- Ability to work independently.
- Ability to lead team and work with external resources.
- Provide backup 24 hour support, as the business requires.

IDEAL CANDIDATE

DeltaV experience is what we are looking for in this role. We need someone who understands it and is able to work with minimal training.
